high performances on tarmac

SanremoCorse is the successful range of wheels realized for tarmac use.

Its structure has been studied to resist heavy loads while maintaining the necessary lightness. The rim contour allows the installation of the largest brakes calipers and the design of the lips facilitates the mounting of hard tires. SanremoCorse can be mounted on many cars, both for racing and road use. Its measures can be easily adapted through the use of an assembly kit, composed of an aluminum hub centric ring and high resistance nuts or bolts.
